For this question we used 3 patterns.

- ➢ Bridge
- ➢ Strategy
- ➢ Factory

Bridge, used to draw list of movie into two ways. One for customers and other for executives. By separating abstraction from implementation we can achieve our problem. So that our database (list of movie) is not tightly couple with one view.

Strategy, used to encapsulate the sort algorithm so as to change the algorithm at run time.

Simple Factory, used to create an object by accepting the name of the object
